PROJECT DESCRIPTION

This Maintenance and Repair Contract N-103 encompassed work on five (5) state highways in the North Region for NJDOT. The roadways repaired on this \$10.5 million construction effort include Route 15, Route 23, Route 46, Route 181 and Route 206. The bulk of the work involved the construction of new curbs, sidewalks, handicap ramps in compliance with ADA standards, drainage inlet/manhole reconstruction, retrofitting existing traffic signals with imaging detection systems, bridge deck joint reconstruction, full depth concrete pavement repair, milling and paving. All of these work items required extensive coordination with NJDOT Traffic Operations for implementation of lane shifts, nightly lane closings and traffic detours in order to be completed safely and efficiently.

SJH Engineering, P.C. provided all construction management and construction inspection personnel needed for the successful completion of this project. All inspector's reports and quantities were entered into the NJDOT Site Manager program. Site Manager was also used to generate payment estimates and change orders.
