PROJECT DESCRIPTION

We performed biennial and interim inspections of 270 bridges in Region 2, New York. Our team inspected and photographed all elements of the bridges. We measured readings along the fascia, abutments/piers, and undermining beneath the bridges. The bridges and the various elements were rated according to NYSDOT bridge inspection rating guidelines. Additionally, we reported yellow and red flag conditions and prepared reports utilizing BIPPI software, per NYSDOT standards.

SJH Engineering, P.C.
